Capsule Networks for Hyperspectral Image Classification	Aleksandra Pizurica
Convolutional Neural Networks (CNNs) analysed via sparse coding	Aleksandra Pizurica
Deep image hashing based on autoencoders	Aleksandra Pizurica
Hyperspectral image classification using sparse representation techniques	Aleksandra Pizurica
Multimodal image registration - case study on Ghent Altarpiece	Aleksandra Pizurica
Network explainability via Variational Auto-encoders	Aleksandra Pizurica
Sparse subspace clustering for large scale hyperspectral data	Aleksandra Pizurica
A stockyard planning heuristic for raw material storage	Birger Raa
Coordinating inbound and outbound deliveries in a distribution center	Birger Raa
Decision tree to determine the optimal storage component for pallet warehouses	Birger Raa
Designing nested routes for cyclic inventory routing	Birger Raa
Models and algorithms for the reconfiguration of assembly systems	Birger Raa
Optimizing logistical processes on container terminals	Birger Raa
Optimizing part feeding in mixed-model assembly lines	Birger Raa
Solving the paint machine assignment problem	Birger Raa
Component matching to relax tolerances in micro assembly	Dieter Claeys
Locating general practitioners stations at hospital sites	Dieter Claeys
A job scheduling game for the doctor waiting room	Dieter Fiems
Modelling optimal routing in road traffic networks	Dieter Fiems
Optimal control of information exchange in energy-harvesting sensor nodes	Dieter Fiems
Queues as quality indicators	Dieter Fiems
Design of a max-flow solution to optimize throughput	El-Houssaine Aghezzaf
Dynamic allocation of assembly tasks in a human-robot collaborative work cell	El-Houssaine Aghezzaf
Integrated production and maintenance decisions in production and assembly systems	El-Houssaine Aghezzaf
Inventory optimization in multi-echelon supply chains: Analysis of a stochastic service models with lot order interval information	El-Houssaine Aghezzaf
Optimization study of drinking water production at De Watergroep	El-Houssaine Aghezzaf
Supplier Managed Inventory and Cooperative Game Theory	El-Houssaine Aghezzaf
Machine learning solutions to manage large-scale IoT networks	Eli De Poorter
The internet of ships: wireless coverage and localization in ship environments	Eli De Poorter
Warehouse drones: design of a localization & networking solution for a drone inventory management system	Eli De Poorter
Imprecise random sequences and how to estimate their probability intervals	Gert De Cooman
Hubs for Circularity (H4C) in Europe, facts and figures	Greet Van Eetvelde
Game theoretic methods for assignment problems	Heidi Steendam
Quaternion sparse representation model for color image processing	Hendrik De Bie
openwifi	Ingrid Moerman
The Rise of the Machines - Cybersecurity	Ingrid Moerman
Optimal layout of tiled information displays	Ivana Semanjski
Optimal Blood Screening Strategies in a Time of Crisis	Joris Walraevens
Chromatic number of the plane	Mario Pickavet
Coastal rescue search with drone swarms	Mario Pickavet
Simulation and modeling of spreading patterns of infectious diseases	Mario Pickavet
Improved Blood Sample Collecting	Pieter Audenaert
Predict how busy a certain part of the city is with Open Data	Pieter Colpaert
Impact of countdown timers for pedestrians on the traffic throughput at signalized intersections	Sabine Wittevrongel
A heuristic for scheduling autonomous torpedo movements	Sidharta Gautama
Detection of changed driving behaviour based on large-volume GPS data	Sidharta Gautama
Fast and accurate map matching of GPS traces	Sidharta Gautama
Integrated City Logistics and Urban Mobility Management	Sidharta Gautama
Urban Recommender Systems for Sustainable Urban Mobility	Sidharta Gautama
Work in progress visualization and value stream propagation	Sidharta Gautama
Dynamic resource allocation models for virtualized networks and their impact on operational cost savings	Sofie Verbrugge
Open access for 5G networks: the business model for a neutral Radio Access Network provider	Sofie Verbrugge
Quantifying Transportation Poverty	Sofie Verbrugge
Winner of the V2X connectivity standard battle: a game-theoretic approach	Sofie Verbrugge
Advanced balancing of a CHP-hot water grid	Stijn De Vuyst
Evaluation of anomaly detection algorithms for veterinary syndromic surveillance	Stijn De Vuyst
Improved sampling techniques for discrete stochastic optimization problems	Stijn De Vuyst
Optimal inspection planning in serial production lines	Stijn De Vuyst
Protocols for routing and consolidation in the Physical Internet	Stijn De Vuyst
Research and simulation on a VLM-street for order fulfillment	Stijn De Vuyst
Spin-glass models for queueing systems with large binary state spaces	Stijn De Vuyst
Multi-objective evolutionary optimization algorithms for production scheduling	Wout Joseph
